The Ming dynasty disintegrated under the weight o Jamil Anderlini DECEMBER 6, 2017

In the early years of the Ming dynastly (1368-1644), China's emperors were obsessed with rooting out bureaucratic corruption. Bribe-taking officials were flayed before execution and their skin attached to mannequins in "scareerow temples" to serve as a warning to others. In more serious cases entire clans were put to death.

The Ming empire eventually disintegrated under the weight of its corrupt bureaucracy and was washed away by the invading Manchu armies.

Chinese president Xi Jinping's most prominent policy initiative since he took power in 2012 has been his anti-corruption campaig. An avid student of imperial history, Mr Xi is deeply familiar with the ancient dynastic cycle in which the "mandate of heaven" – the emperor's divine right to rule – was inertiably lost hanks to corruption, inequality and incompetence.

Despite this awareness, it is striking to see how closely China's modern anticorruption apparatus mimics the Ming system of "touring corruption inspectors".

Workers at a construction site of a railway bridge in Uttar Pradesh two years ago. Narendra Modi last week looked back o premienship and urged citizens to create a new India © Bloomberg

Amy Kazmin - New Delhi AUGUST 21, 2017

D 173 🖶

When India marked the 50th anniversary of its independence from British colonial rule in 1997, I joined the sea of Indians who thronged Rajpath, the wide ceremonial boulevard in New Delhi's heart, for jubilant celebrations.

Ageing freedom fighters who had struggled against the British raj led a festive parade, followed by spectacular fireworks. On giant screens, the crowd watched black-and-white footage of Jawaharlal Nehru, India's first prime minister, deliver his renowned "tryst with destiny" speech.

The mood was upbeat. After a severe financial crisis, India was opening to the outside world, creating a sense of optimism and possibility. As Nehrwi's stirring words — "at the stroke of the midnight hour, while the world sleeps, India will awake to life and freedom" — rang out over the crowd, shivers ran up my spine.

Last week, India marked its 70th independence anniversary differently. From the ramparts of the Red Fort, Narendra Modi, prime minister, looked back not at seven decades of freedom, but his own policies of the past three years,

<text>

Two weeks later, Hurricane Irma churned into Florida, killing at least 33 people there and causing billions more in damages - as well as brutal loss of life in the Caribbean.

But the storms may not be 2017's deadliest U.S. disaster. Instead, that title may go to a largely unseen killer: rising temperatures.

Over the last 30 years, increasingly broiling summer heat has claimed more American lives than flooding, tornadoes or hurricanes, according to the U.S. National Weather Service.

And the problem has not been limited to the United States. More than 33,000 people died during a European heatware in 2003, and tens of thousands perished in Rossia during extreme heat in 2000.

The threat is particularly severe in already sweltering places, from South Asia to the Gulf, and has been linked to a rise in minution out of but and ouse mere of need Dahlaton.

Excessive heat has claimed more American lives than flooding, tornadoe or hurricanes between 1980-2016

DELHI—The Yamuna River that flows through this ancient city has helped sustain some of India's greatest empires. Hindu poets celebrated its life-giving properties. The Mughal dynasty built the Taj Mahal and other monuments along its banks.

Today, the Yamuna is a foul sludge for much of its 855-mile run. In Delhi, it is black and nearly motionless, covered in many areas with a foam of industrial chemicals, floating plastic and human waste.

years training and teaching at eitte facilities including China's top inguistics academy for military intelligence officers, the Financial Times has learnt. Since being elected in 2011, Mr Yang has been a big fundraiser for the National

Since being elected in 2011, sirr rang has been a oig minoraiser for the National party. He has consistently pushed for closer ties with Beijing and for international policies and positions echoing those of China's Communist party.

The fact he has served for six years in the governing party of a member country of the US-led "five eyes" intelligence alliance raises questions about western preparedness to deal with China's increasingly aggressive efforts to influence foreign governments and spy on them.

"China has been very active in recent years placing and cultivating people at the grassroots political levels of western democracies and helping them to reach solitions of influence," said Christopher Johnson, a former senior China analyst at the US Central Intelligence Agency now at the Center for Strategic and International Studies in Washwarton.

WASHINGTON — The Chinese government systematically dismantled C.L.A. spying operations in the country starting in 2010, killing or imprisoning more than a dozen sources over two years and crippling intelligence gathering there for years afterward.

Current and former American officials described the intelligence breach as one of the worst in decades. It set off a scramble in Washington's intelligence and law enforcement agencies to contain the fallout, but

AWARD FOR EXCELLENCE

Judges' Comments:

This amazing story was perhaps the biggest spy scandal of the decade, and perhaps since the end of the Cold War -- the dismantling of the entire American spy network inside China and the imprisonment and execution of intelligence operatives. This is the very definition of a scoop, and deserves the highest praise. The New York Times

SPECIAL REPORT Ten months after she ran away from home, Yufrinda Selan eventually returned a day before her 19th birthday. But it wasn't tears of joy that greeted her.

Yufrinda's family howled as her body, wrapped in a shroud, arrived in a white coffin at

SN YI

Muyeji Freddy and his team have scoured the bush for hours, but they haven't bound what they're looking for. Freddy would rather not return to camp so early in the day, with the sun still high, but the fraitless search leaves him no choice.

"Next went, we'll move on and camp in another place," to tells his group of logger some 40 young men from nearby villages.

Their home and hunting grounds are the vast highlands of the Katanga Plateau, in the deep south of the Democratic Republic of Congo is central Africa. Their prey: multula trees, or bloodwood.

For the past two years, Freddy and his fellow loggers have followed the same routine: Carrying just the bare necessities, such as tents and big cooling pobs, they move through the forest to look for manufa trees log them, and sell the wood to Chinese buyers in the provincial capital.
